

Assessment of Value Report

As at 30 June 2024

Published October 2024

HSBC Asset Management | Opening up a world of opportunity

A message from the CEO

of HSBC Asset Management (Fund Services UK) Limited

Matthew Higginbotham
Chief Executive Officer

UK markets have continued to face heightened volatility in the last year. The likelihood of returning to the pre-2020 period of economic stability with low interest rates remains unlikely, as we continue to face macroeconomic challenges, higher interest rates and inflation, and ongoing geopolitical instability.

In these circumstances, HSBC Asset Management remains focused on what we believe matters most to our fund investors: value. As such over the past year, aligned with our philosophy of continuous improvement, we have implemented the following enhancements to our fund range.

Enhancements since our last assessment

- ◆ We have introduced tiered pricing across one of our fund ranges. This will allow fund investors to benefit from reduced fees as further economies of scale are generated.
- ◆ We completed the successful transition of the UK Authorised Corporate Director from HSBC Global Asset Management (UK) Limited to a new HSBC Group entity, HSBC Asset Management (Fund Services UK) Limited, facilitating further independence between the authorised corporate director and the investment manager of the UK fund range.
- ◆ We continued to work on the implementation of the Financial Conduct Authority's (FCA) Sustainability Disclosure Requirements (SDR).

- ◆ The Global Property Fund has been restructured to invest in shares of infrastructure companies and as such the name and associated fund documentation amended to Global Listed Real Assets Fund. We believe that the change in investment approach has the potential to deliver improved outcomes for investors. These changes were effective from 24 September 2024.
- ◆ We have made enhancements to the way we oversee the ESG investment credentials of the investments we make. We have introduced sustainable client reports for a select group of ESG aligned funds and set out a climate value proposition framework to enable us to meet client needs.

Our global HSBC Asset Management DE&I programme, introduced four years ago, has gone from strength to strength. In the UK, we now have 125 volunteers working across 11 key workstreams.

We continue to enhance to the quality of what we deliver and are grateful to our investors for placing us among the top three UK Asset Managers for value in the latest Boring Money* Fund Investor Tracker results, and on average, in the top four over the last 12 months.

2023/24 Assessment of Value Report

I am pleased to publish our fifth annual Assessment of Value Report. We hope this report provides you with a comprehensive appraisal of the value delivered by our UK fund range and reinforces your confidence in HSBC Asset Management as your trusted partner for investments. Thank you for this trust and if you have any suggestions on how we can further improve our service to you, please contact us at hsbcenquiries@ntrs.com.

Best wishes,

A handwritten signature in dark ink, appearing to read 'MH', with a long, sweeping horizontal line extending to the right.

Introduction to our Assessment of Value Report

About this report

About us

HSBC Asset Management (Fund Services UK) Limited is the UK Authorised Corporate Director and one of the companies that form HSBC Asset Management, the asset management arm of the HSBC Group. Although comprised of different legal entities around the world, HSBC Asset Management is run as a coordinated business across locations. This allows us to leverage the advantages of worldwide presence and scale, plus local expertise.

What is an Assessment of Value?

The FCA's Asset Management Market Study concluded that market forces in the fund industry were weak, leading to many overpriced and low-quality products. One of the FCA's remedies was to require that Authorised Fund Managers (AFMs) make an annual public attestation to the value their funds offer and outline any corrective actions taken, if appropriate.

Our Assessment of Value criteria

The FCA provided managers with seven minimum criteria to consider when assessing the value of their funds. We took these criteria and, from an investor's point of view, asked ourselves the questions listed below. We have provided more detail on how we have assessed each of these areas in the methodology section of this report.

Quality of service

How have our funds measured up against a series of areas that we believe are important to the overall investment experience? These include operational oversight, our investors' experience, risk management, investment capability and our responsible investment framework.

Performance

Have our funds and share classes achieved their performance objective and other measures within their investment policy and strategy? How does performance compare to other similar funds and share classes available from other fund managers?

AFM costs – general

What is the breakdown of our fund charges? Are the costs of our funds and related services offering fair value?

Economies of scale

Are the savings and benefits that we achieve through our funds and HSBC AM UK's size and scale being shared with investors?

Comparable market rates

How do the costs compare to the costs of other similar funds available from other fund managers?

Comparable services

How does the fund compare to other similar funds, institutional mandates and share classes managed by HSBC with similar investment objectives and policies?

Classes of shares

Are investors in the best share class for which they are eligible? Are the points of differentiation between these share classes appropriate and justified?

Throughout this report we explain in more detail how we have reached our conclusions for each of these areas.

Our Assessment of Value ratings

Our ratings framework

We have used a two-tier system to conduct our Assessment of Value. Firstly, we assessed our funds and share classes against the seven assessment criteria detailed in the table below and rated each of these individual assessments against a traffic light system using the following principles:

Green	Our assessment of this criteria has found that the fund/share class is delivering good value to investors, and no material issues have been found.
Amber	Our assessment of this criteria has found that the fund/share class is delivering moderate value to investors, however, there are areas that need management action and/or oversight.
Red	Our assessment of this criteria has found that the fund/share class is delivering poor value to investors, and there are areas where management action has been, or will be, taken.

The following table shows each of the seven assessment criteria we have used to assess our funds.

Assessment criteria for each of our funds							Overall value conclusion
Quality of service	Performance	Costs					
		AFM costs – general	Economies of scale	Comparable market rates	Comparable services	Classes of shares	

Overall value conclusion

Secondly, we considered all of the individual criteria assessments for each fund’s share class at an aggregated level to determine an overall value conclusion for each share class. Considering each of the seven assessment criteria equally, we produced a quantitative view of the overall value conclusion. Provided with this information, as well as other qualitative information about the funds, the Board was able to take a measured view on the overall value delivered to investors. We used a second traffic light system and set of principles to conclude on our Board’s overall evaluation of each fund/share class. These are the ratings seen in the two-page summaries for each of the funds:

Met	Having considered the fund’s costs, performance, and the quality of service provided to our investors, we believe that the fund is delivering good value.
Partially Met	Having considered the fund’s costs, performance and the quality of service provided to our investors, we believe that the fund is delivering value in most areas. Management action may be necessary, or has already been taken, and we will review its effectiveness.
Not Met	Having considered the fund’s costs, performance and the quality of service provided to our investors, we believe that the fund is not delivering value and management action has been, or will be, taken.

Chair’s statement

As the Chair of the HSBC Asset Management (Fund Services UK) Limited Board, it is my pleasure to endorse this year’s Assessment of Value Report. The intention of the Board is to provide our fund investors with a transparent and fair appraisal of the value delivered by each of our funds.

This is our UK fund range’s fifth Assessment of Value Report, and we continue to build on the work done in previous years to further enhance our processes. The review period for this assessment runs for the year to 30 June 2024. Whilst the information in this report supports the conclusion that we continue to provide good value to investors in the UK market, we recognise that we should not be complacent and as such we will continue to look for opportunities to improve.

Our Assessment of Value framework

Value to us means more than just price; we apply a holistic approach that includes evaluating the overall quality of service, ensuring that our end investors are well equipped to make informed decisions that meet their investment objective and goals.

We consider each of the FCA’s seven assessment criteria with equal weighting; performance, general costs of the fund, economies of scale, comparable market rates, comparable services, classes of shares and quality of service. We have revisited our fee structures across our strategies, re-negotiated with our third-party service providers to achieve economies of scale and we continue to simplify our approach to our share classes. Our aim is to ensure investors are in the share class for which they are most eligible, enabling them to achieve savings or benefits from our size and scale.

As Consumer Duty Champion for HSBC Asset Management (Fund Services UK) Limited, I recognise that Consumer Duty sets higher expectations for the standards of care that firms must provide to their retail investors. This aligns with our core purpose and mission. Many of the insights gathered from the assessment of value review demonstrate the value we provide to investors across our UK fund range and align with our ongoing obligations with regard to Consumer Duty.

Our conclusions

In this report, we have given each fund a two-page summary where we explain how it has met, partially met, or not met the assessment criteria, and whether we consider each share class has delivered value. The table below shows the overall conclusion of our assessment and it is encouraging to see that most funds and share classes deliver value. However, the report also identifies funds and share classes that are only partially, providing value. For those funds or share classes, we have detailed the actions that we have already taken, or that we commit to take, within the individual two-page fund reports.

	Green	Amber	Red
Assets Under Management (AUM)	£57.45bn	£258m	-
Percentage of AUM	99.5%	0.5%	-
Number of funds	42	1	-
Percentage of funds	98%	2%	-

Where we have rated a fund or share class as green, we consider that the fund’s costs, performance, and the quality of service provided, deliver good value to our investors. Although amber-rated funds or share classes deliver value in most areas, we believe these require more frequent review and/or some management action to be taken.

Since last year, we have completed a number of actions to improve value for investors. A full explanation of these actions has been included on [page nine](#). The Board will continue to challenge the business where we feel further action needs to be taken.

We hope that this report provides our investors with a straightforward way to assess the value delivered by their funds. We have made our report available in the Fund Centre section of our website alongside our fund factsheets, to make it even easier for existing and new investors to access information on their funds.

Best wishes,

Peter Dew

Meet our Board

The responsibility and oversight of the Assessment of Value transferred to HSBC Asset Management (Fund Services UK) Limited, from HSBC Global Asset Management (UK) Limited at the end of July 2024. Whilst the previous Board has supported this transfer, the HSBC Asset Management (Fund Services UK) Limited Board, which includes executive directors and independent non-executive directors, is now responsible for representing the best interests of investors and implementing the outcomes of the Assessment of Value.

Independent Non-Executive Chairman

Peter Dew

Independent Non-Executive Chairman

Over 40 years' Financial services experience
Board Member since June 2022

Board Independent Non-Executive Director

Simeon Brown

Independent Non-Executive Director

Board Member since October 2023

Lucy Williams

Non-Executive Director

30 years' Financial services experience
Joined HSBC in 2013
Board Member since November 2021

Changes since last year's report

What changes have we made to our funds since last year's report?

The table on the right summarises the main actions we have taken following last year's Assessment of Value review. The action taken column explains the changes we have made to improve the value of these funds for investors.

Update since the last Assessment of Value	Action taken
Consumer Duty	We have embedded a Consumer Duty lens, enhancing our governance model and data strategy to ensure ongoing compliance with Consumer Duty outcomes. Our customer journey mapping has evolved to ensure we identify areas of vulnerability, respond and enhance our processes to ensure the service we offer continues to improve. The quality of service that our fund investors receive has improved to ensure investors are supported throughout their journey, to help make informed decisions about their investments.
The Task Force on Climate-related Financial Disclosures (TCFD)	We published our second TCFD report in June 2024. Over the course of 2023 we delivered a number of enhancements: the publication of our new Energy Policy and the revision of our existing Thermal Coal Policy, both of which are aimed at supporting our transition commitments, investment in in-house software solutions, supporting our ability to identify climate risks and opportunities, and also enhancing our disclosures framework. The TCFD's recommendations set an important framework for understanding and analysing climate-related risks, and we are committed to providing regular and transparent reporting of key climate-related information.
Global Strategy Portfolios	We have introduced discounts to the annual management charges, which apply when each Global Strategy Portfolio reaches a certain size. As part of this change we have also increased the base annual management charge but we believe that the revised charges, together with the introduction of discounts, continue to offer good value to investors while fairly compensating us for the work undertaken. We also believe that the overall charges will continue to be competitive.
Global Property Fund	The Global Property Fund has been restructured to invest in shares of infrastructure companies and as such the name of the fund has changed to Global Listed Real Assets Fund. We believe that the change in investment approach has the potential to deliver improved outcomes for investors. These changes were effective from 24 September 2024.
Sustainability Disclosure Requirements	During 2023, the FCA published its Sustainability Disclosure Requirements (SDR) and we are looking at our fund ranges and considering where a sustainability label may be appropriate. By the end of 2024, we expect to confirm which funds will receive a sustainability label. Investors in those funds will be notified of these changes in advance.

Our Assessment of Value methodology

Quality of service

How have our funds measured up against a range of areas that we believe are important to the overall investment experience?

The term service can mean different things to each of us. It goes beyond just complaint handling, technological advancements and adhering to guidelines. As investors' expectations continue to evolve, it is crucial that we listen and evolve too.

To assess the range and quality of services provided to our investors, we considered a wide array of areas in our assessment that we believe are important to the overall investment experience. We gathered key metrics for each of these areas to see how we have measured up and have classified them under four broad categories.

Operational oversight

- ◆ How we oversee and monitor third parties to protect investors' assets. Here we consider distributor due diligence, the strength of our conduct framework and how we manage conflicts of interest.
- ◆ Our product development life cycle: how we develop our products from idea generation through to product launch and the effectiveness of our ongoing reviews.

Our investors' experience

- ◆ Are the objectives and fund charges clear?
- ◆ What improvements have we made to our website and marketing materials?
- ◆ How quickly and efficiently do we respond to enquiries?
- ◆ Do we have a robust complaints process?

Risk management framework

- ◆ How robust is our investment risk oversight and risk governance?

Investment capability

- ◆ Our investors' experience: do we run our funds within their investment guidelines and restrictions?
- ◆ Responsible investing: are we delivering on the sustainable investing considerations within the fund objectives?
- ◆ Expertise and experience of our portfolio managers: including their ongoing professional development training and the regulatory Certification Regime.

How can we do better?

We will continue to enhance the measures we use to monitor the quality of service we provide to investors. Our metrics have evolved throughout our journey, and we are enriching them further with more qualitative analysis to enable us to produce metrics that help us mitigate and resolve emerging issues. Enhancements are being made in developing inclusive products and services as well as equipping all colleagues in customer facing roles to support customers in vulnerable circumstances. In addition to continuously upskilling our people, we are also determined to improve diversity and inclusion across the firm. Putting our investors at the centre of everything we do has always been our practice.

Our Assessment of Value methodology (continued)

Fund performance

How have we assessed the performance of our funds?

We base our fund performance assessments on actual market data so that we can assess performance of our funds in a consistent, repeatable and fair manner. Each of the factors we use are uniquely applicable to the investment strategy of each fund type. For example, while an actively managed fund will typically aim to outperform its benchmark, an index fund is thought to be successful if its benchmark is closely tracked. We have used five years as the main time period by which to assess performance as we generally consider long term to be five years or more.

To explain this in more detail, we have included information below on the differences between our assessments of the three different types of funds within our UK fund range.

Index funds:

We assess the performance of our index funds by checking that the tracking error (movement away from the index being tracked) is sufficiently close to the anticipated tracking error specified in the fund prospectus. We compare the fund's performance against other managers' similar funds, over an appropriate timescale, considering the objective and strategy. We set out the return on cash investment on the two-page summary.

Multi-asset funds:

We assess the performance of our multi-asset funds by considering whether each fund has met its key objective clauses, such as providing growth and/or income over the appropriate timescale given the fund's objectives and strategy. We also check whether the return on the fund is higher than the peer group's average return and the volatility* (risk taken) is lower. For the sustainable multi-asset funds, we check the Carbon Intensity and ESG Improvement scores.

Active funds:

We assess the performance of our active funds by considering whether each fund has met its stated objective such as providing growth, income or higher returns than the stated benchmark over the period specified. We also consider how the funds compare to other similar active funds within each relevant Morningstar category.

Share class analysis

The performance assessment has been conducted on all share classes. Where we compare the performance to other similar funds, the two most expensive types of share classes are used due to comparability with similar share classes of competitor funds. This includes the Investment Association (IA) primary share class and the most expensive share class (Retail share class in majority funds). Due to this assessment being performed net of fees, all other share classes with lower charges would have fared equally or better than these share classes.

How can we do better?

We are always seeking ways to improve the performance, risk management, and the transparency we provide, and continually work to be more innovative in our investment processes to better take advantage of market opportunities and mitigate risks. We have included additional asset classes and portfolio fulfilment strategies which we believe will enhance our ability to deliver strong risk-adjusted returns to our investors. We will continue to make use of new technologies and automated screening of potential investments to obtain wider opportunity and improved level of information to select assets and construct portfolios. We are also continuing to enhance our ESG integration, screening and engagement in line with industry best practices.

To see how each fund has performed, please go to the individual fund two-page summaries. These show the Investment Association (IA) primary share class on the first page and the results of other share classes are summarised on the second page.

*Volatility is measured by taking the level of return achieved per unit of risk to consider whether it outperformed on a risk-adjusted basis (Sharpe ratio). More information on the Sharpe ratio is available in the Glossary on page 113 and the fund factsheet.

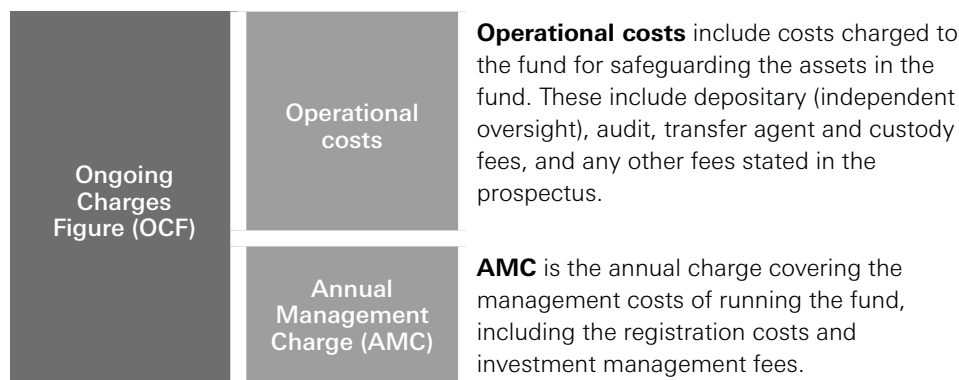

Our Assessment of Value methodology (continued)

AFM costs – general

What is the breakdown of our fund charges?

The Ongoing Charges Figure (OCF) is made up of the fees and charges incurred by the fund including the Annual Management Charge (AMC) and operational costs such as custody costs, depository fees, transfer agent fees and auditor fees. Where the funds invest in other funds, the OCF includes the impact of the charges of those funds. It excludes transaction costs, which are explained below. The OCF provides a standard way of measuring the annual cost of investing in a fund.

The costs assessments have been conducted on all share classes. Where a peer group comparison is required, the assessments have been conducted on the two most expensive types of share classes to allow for comparison with similar share classes of competitor funds. This includes the Investment Association (IA) primary share class and the most expensive share class (Retail share class for the majority of funds). Due to these assessments being performed net of fees, all other share classes with lower charges would have fared equally, or better than, these share classes.

Transfer agents fees

We have changed the way fees associated with transfer agent and related services are paid for. These services include processing instructions from investors to buy and sell shares in the funds and issuing statements. The services are provided by third party companies who charge for these services. Previously their fees were paid by us but, given the importance of these services to the overall operation of the funds, we felt it was appropriate to charge these fees directly to the funds going forward.

However, the fees charged to each applicable share class will be capped. While we believe these services are currently competitively priced and provide good value, we will continue to negotiate with the companies providing these services. Any future savings in the costs of these services will be applied to the funds and therefore shared with investors.

Transaction costs

Transaction costs are additional charges paid by the fund. They cover the costs incurred when the fund manager trades in underlying investments within the funds such as broker commissions, stamp duty, and other taxes. Trading is necessary to achieve the investment objectives of the fund. In addition, there is a dealing spread between the buying and selling prices of the underlying investments. These may vary considerably depending on the transaction value, market sentiment and the financial market itself.

While overall costs have an impact on returns, it is important not to compare transaction costs between funds as an indicator of future performance. Transaction costs vary over time, differ from country to country and between different types of assets.

The transaction costs are disclosed in the two-page summaries for each of our funds. More information on our transaction costs can be found in our Glossary on [page 115](#) and on our [website](#) in our 'Enhanced disclosure of fund charges and costs'.

Are the costs of our funds and related services offering fair value?

It is important to us that all the products and services we offer deliver fair value to our clients and investors. For this assessment we considered the breakdown of the charges into the OCF and its sub-components. We then looked at the operational costs and the AMCs to determine whether the charges are reasonable compared to the costs of providing the services to which they relate. We did this by checking operational costs with the external service providers to ensure they are reasonable and appropriate for the services provided, and by considering the level of profitability on a fund-by-fund basis.

How can we do better?

During 2024, we carried out a detailed review of our profitability and worked with a consultant to set up a global profitability model which has increased the sophistication of our analysis. The new global profitability model is being enhanced further as we continue to review our cost drivers which allows us to better allocate relevant costs to specific funds, and we will continue to build on this approach for further reviews.

Our Assessment of Value methodology (continued)

Economies of scale

Are savings and benefits that we achieve through our funds and HSBC's size and scale being shared with investors?

Passing on economies of scale to our investors and how best to do it has been a key consideration over the past few years. We have also explored any reinvestment in our business that will enhance value for investors. We then reviewed the structure and profitability of our funds to see how any savings or benefits that are achieved through economies of scale are shared with investors.

Over the past few years we have taken steps to enhance the value we deliver to investors. We have been able to negotiate reduced licence fees for our index funds that track a FTSE index. As these fees were being paid by the funds, the reduction benefits our investors. As these rates are based on our total Assets under Management across all the funds, these will decrease further if the assets increase.

We have expanded the range of funds for which we apply discounts to annual management charges to include our Global Strategy Portfolios. This was previously only being offered on our World Selection Portfolios. This structure allows us to share further economies of scale savings that we found are achieved as the size of each fund increases.

The operation of the charging structure is described in more detail below, but in summary, discounts are applied to the AMC, for certain share classes of each fund, when the fund reaches a certain size. Where discounts are applied, this has the effect of reducing the overall charges paid by investors in that fund.

How does the charging structure operate?

The discounts to the AMC that apply for each fund are based on the size of the fund, as measured by its total Net Asset Value (NAV), being the value of the assets of the fund (less any liabilities). Where they apply, discounts are only made to the AMC of the Income C and Accumulation C share classes of the fund and no other share classes are affected. The discounts are applied in tiers with the rates determined by the proportion of the fund's total NAV that falls within the ranges shown in the table on the right. A weighted average of the overall discount rate that applies is then calculated and applied to the AMC. This means that only the proportion of the fund's NAV that falls within each range receives the applicable discount for that tier.

Net Asset Value Range	Discount applied to AMC based on the proportion of the fund's Net Asset Value falling with the range shown	
	World Selection range	Global Strategy range
£0 – up to £0.75 billion	0.00%	0.000%
In excess of £0.75 billion – up to £1.50 billion	0.02%	0.005%
In excess of £1.50 billion – up to £2.25 billion	0.04%	0.010%
In excess of £2.25 billion – up to £3.00 billion	0.06%	0.015%
In excess of £3.00 billion – up to £3.75 billion	0.08%	0.020%
In excess of £3.75 billion – up to £4.50 billion	0.10%	0.025%
In excess of £4.50 billion – up to £5.25 billion	0.12%	0.030%
In excess of £5.25 billion – up to £6.00 billion	0.14%	0.035%
In excess of £6.00 billion – up to £6.75 billion	0.16%	0.040%
In excess of £6.75 billion	0.18%	0.045%

Further detail on the methodology is included in the HSBC OpenFunds prospectus, which is available on our [Fund Centre](#).

How can we do better?

We continually review the service and compare the costs of our funds' service providers, and negotiate savings where we can. Now that we have established our new tiered pricing structure across two of our multi-asset fund ranges, we are considering extending the framework to other ranges. We will continue to check the NAV of other fund ranges annually to identify when they qualify for the discounts. This will ensure that economies of scale savings are being shared with investors for our larger funds where appropriate.

Our Assessment of Value methodology (continued)

Comparable market rates

How do the costs compare to the costs of other similar funds available from other fund managers?

It is important that our funds and share classes represent fair value to investors and are competitive relative to other funds in the market.

For this assessment, the Investment Association (IA) primary share class and, where different, the most expensive share class for each fund are ranked in quartiles on an OCF basis against the fund's respective Morningstar category. These Morningstar categories are independently classified based on holdings and objectives. We exclude active funds for the index funds' analysis and exclude index funds for the active funds' analysis. We have used the peer group median for this comparison.

When we identify that funds or share classes are more expensive than peers, we look into why that is and whether the additional premium can be justified. If not, we will propose a reduction of the fees.

Share class analysis

This assessment is conducted on the two most expensive types of share classes due to comparability with similar share classes of competitor funds. This includes the Investment Association (IA) primary share class and the most expensive share class (in some cases they might be the same). Due to these assessments being performed net of fees, all other share classes with lower charges will fare equally or better than these share classes.

How can we do better?

Keeping on top of the costs of our funds to investors is a key way of ensuring that our funds remain competitive. We review the pricing of our funds on an ongoing basis and will continue to make reductions where we feel our funds are not as competitively priced as they should be.

Our Assessment of Value methodology (continued)

Comparable services

How does the fund compare to other similar funds, institutional mandates and share classes managed by HSBC?

HSBC provides asset management services to a wide range of clients, including individuals and institutions who invest with us through funds and segregated mandates. It is important to us that all our investors receive fair benefits when they invest with us.

For this assessment we considered the charges of funds and institutional client mandates that we felt were comparable to the share classes within our UK domiciled funds. This included the funds of our associated companies, institutional mandates and the cross-border funds that we market in the UK.

Comparable factors

Comparability is mainly determined by the same or similar investment objective, strategy and policy, including benchmark and target market. With this comparison we want to make sure that the fees we are charging our investors are reasonable. For funds with comparable mandates, we reviewed any additional benefits provided to our fund investors and assessed if the additional charges were reasonable and justified the added service provided.

Key reasons for price differences were:

- ◆ Costs incurred by the different fund types and domiciles
- ◆ Size of mandates and/or expected flows for funds
- ◆ Scale of the overall client relationship
- ◆ Different servicing requirements, including reporting

For some funds and their respective share classes, there are no comparable products or services.

Share class analysis

We have conducted this assessment on all share classes. However, for comparability, the Investment Association (IA) Primary share class and the most expensive share class have been compared to similar funds, but allowing for the rebates paid to the remaining investors in the Retail share classes. This main Primary share class is the most appropriate comparator for ETFs and equivalent clean fee share classes in our Luxembourg funds.

Mandate pricing is compared to equivalent institutional fee paying share classes, where available, as those are discounted due to larger holdings.

How can we do better?

We strive to ensure that all our investors are treated fairly and are receiving value for the investments they have made with us. We will continue to review the fees we are charging our investors against the services provided. If we determine that these costs are not justified, we will make relevant changes keeping in mind the best interest of our investors.

Our Assessment of Value methodology (continued)

Classes of shares

Our funds are designed with the needs of different types of investors in mind. This is why there are several types of share classes on offer, reflecting the different services we provide and the different types of investors we provide them to. For more information on these share classes please refer to the fund's prospectus.

Are investors in the best share class for which they are eligible?

At the time of our first Assessment of Value review, all investors in share classes with higher charges than those applying to other similar share classes of the same fund were notified and converted to clean fee share classes if they did not opt out of the conversion. The opt-outs were generally because the remaining investors in these share classes are still in receipt of legacy rebates.

We continue to conduct semi-annual reviews of all share classes to check that all investors are in the appropriate charging share class. Where investors are in more expensive share classes than they should be, we flag this in our assessment and write to these investors advising that they will be converted to the cheaper share class (generally the clean C share class) after 60 days' notice. Where appropriate, we will refund the difference in fees.

Sometimes we identify investors in cheaper share classes than they should be. We also write to these investors advising that they will be converted to the share class that they qualify for. This is not flagged in the report, as these investors are paying less than they should be.

Are the points of differentiation between these share classes appropriate?

Year on year, the Board has also considered the degree of difference that exists between the prices of each of the share classes. This is to identify the level of differentiation between cheaper and more expensive share classes, and assess whether this difference is fair and proportionate to the size of each investment and the service being offered.

How can we do better?

It is important that our investors are in the most appropriate share class for them. We have internal checks and controls in place to ensure that new investments are directed to the correct share class and we will continue to ensure that these controls operate fairly for all investors.

Value factors applicable by fund type

For ease of navigation, we have structured our report into three separate sections according to the different type of funds investors hold – index funds, multi-asset funds or active funds. These sections are ordered according to the number of investors in the funds from highest (index funds) to lowest (active funds).

Each fund type section also contains a two-page summary for each fund. The first page contains information on the IA primary share class and the second page includes information on other share classes.

* Fund restructured and renamed to Global Listed Real Assets Fund, changes effective from 24 September 2024.

** Notice has been issued to investors in the Global Strategy Sustainable Portfolios to advise that we are closing the funds with effect from 22 November 2024.

Index funds

These are funds that track a specific index such as the FTSE All-Share Index or the S&P 500 Index. For these funds, the manager invests in accordance with pre-determined weightings of the index, which does not involve any forecasting. The performance should be as close as possible to that of the index after fees are paid. They are sometimes referred to as 'tracker' funds.

Index funds overview

Index fund management is at the heart of our business strategy. We have been successfully managing index funds for external clients since the launch of our first fund, the American Index Fund, in October 1988. We have subsequently grown the index fund suite to a total of 12 funds, which includes both equity and fixed income index funds.

We are passionate about our index funds and the benefits they bring. Most managers will explain that managing index funds is about purchasing and selling securities in line with the reference index. While this is true, in doing so we also make use of investment techniques designed to counteract the impact of transaction costs, which we reduce as much as we

can, with the ultimate aim that the performance of the fund matches its reference index as closely as possible and in the most efficient way.

The following table summarises the outcome of our Assessment of Value for the Investment Association (IA) primary share class* of each of our UK domiciled index funds for the year ending 30 June 2024. We have used the traffic-light system we explained on [page six](#) to come up with the ratings and overall value conclusion for each of our funds and share classes. The fund two-page summaries explain why we have given these ratings and contain information on the other share classes.

Fund objective

The fund aims to track the performance of the S&P 500 Index before the deduction of charges and tax.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objectives. The fund has tracked the performance of the S&P 500 Index. The tracking error of the fund is slightly above the anticipated tracking error at 0.14%, due to market volatility but is broadly in line with our expectations. It has outperformed its peers delivering annualised growth of 15.00% versus a peer group return (median) of 14.63%.

Performance compared to benchmark

Source: Morningstar and HSBC Asset Management as at 30/06/2024.

Past performance is not an indicator of future returns. The figures are calculated in the share class base currency, dividends reinvested, net of fees.

	This fund	*Peer group median	Cash
5 year annualised performance (% and of £1,000)	15.00% £2,011	14.63% £1,979	1.88% £1,098

Key points – the fund

- ◆ Passively managed fund
- ◆ Size of fund: £15,003m
- ◆ Benchmark: S&P 500 Index
- ◆ Peer group: Morningstar US Large-Cap Blend Equity Category

Fund charges

[◀ LIST OF FUNDS](#)

*Peer group: Morningstar 'US Large-Cap Blend Equity' category, filtered on Investment Association primary share classes and to include index tracker funds only (14 funds on 30 June 2024). OCF as shown in KIIDs as at 09 February 2024. Transaction costs as at 30 June 2024. Charges are variable and may change in future. Cash has been included as one of the performance measures for the fund, as we believe it helps investors see how the fund compares against cash. However, it is important to note that the objective of the index fund is solely to track the index.

American Index Fund

– FCA criteria by share class

		Fund share classes:	C	Retail*
Ongoing Charges Figure (OCF) – accumulation share classes:			0.06%	0.16%
Ongoing Charges Figure (OCF) – income share classes:			0.06%	0.16%
	Quality of service Our assessment has concluded that the fund has measured up well against all the quality of service areas within this assessment criterion and delivers value for investors across all share classes.		●	●
	Performance The fund has marginally exceeded its tracking error threshold over the 5-year period. The political crisis in 2022 led to the high market volatility and higher tracking error. It has achieved all the other measures within the investment policy and strategy and the fund performs well versus peers.		●	●
	AFM costs – general Having considered the breakdown of our fund charges and the costs of running the funds and any related services, we have concluded that fair value has been delivered across all share classes.		●	●
	Economies of scale Our assessment of this criteria has concluded that economies of scale savings and benefits have been achieved where appropriate.		●	●
	Comparable market rates Our assessment concluded that the OCFs of the share classes within this fund were either in line with, or lower than, the OCFs of other similar funds available from other fund managers.		●	●
	Comparable services Our assessment concluded that the cost of the share classes within this fund were either in line with, or lower than, the costs of other similar funds, institutional mandates and share classes managed by HSBC.		●	●
	Classes of shares Our assessment of the share classes within the fund concluded that all investors are in the most appropriately priced share class and the points of differentiation between each of the share classes are justified.		●	●
Overall value conclusion			●	●

Developed World Sustainable Equity Index Fund – Accumulation C

Fund objective

The fund aims to track the performance of the FTSE Developed ESG Low Carbon Select Index before the deduction of charges.

Performance commentary

Over the three-year period to 30 June 2024, the fund has met its objective. The fund has successfully tracked the performance of the FTSE Developed ESG Low Carbon Select index, with a tracking error of 0.07%. It has underperformed its peers delivering annualised growth of 9.02% versus a peer group return (median) of 9.77%. At the end of the reporting period, the fund exhibited a 47% relative reduction in carbon intensity score versus the FTSE Developed Index (the parent index). The fund also had a higher ESG score of 4.0 versus the FTSE Developed Index score of 3.5.

Performance compared to benchmark

OCF compared to peer group*

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved across all seven criteria.

The OCF in the above diagram shows the fund as fourth quartile compared to peer group funds. However, we are aware that different funds calculate their costs in different ways. The OCF of this fund includes the costs of the underlying vehicles (other funds and investment trusts) held by this fund. When compared with other similar funds on a like-for-like basis, this fund is less expensive than the peer average. Therefore, we have rated this assessment criterion as green for all the share classes

Multi-asset funds

Multi-asset investing is a form of active fund management where the fund manager selects a blend of investments in a globally diversified portfolio designed to achieve specific risk and return objectives. Our multi-asset strategies invest in shares of companies (also known as equities), bonds, property, other alternative asset classes and cash, mainly through investing in other funds that in turn invest in these assets.

Multi-asset funds overview

Multi-asset strategies are targeted to meet a range of investment objectives which reflect our diverse client base. Our portfolios aim to generate smoother return streams by diversifying across markets, asset classes, geographies and investment styles, and by managing to strict risk budgets.

Our strategies benefit from our teams' years of experience in advising clients on investment guidelines, benchmarks and risk tolerance criteria, together with an extensive knowledge of local regulation and industry trends.

The following table summarises the outcome of our Assessment of Value for the Investment Association (IA) primary share class* of each of our UK domiciled multi-asset funds for the year ending 30 June 2024. We have used the traffic-light system we explained on [page six](#) to come up with the ratings and overall value conclusion for each of our funds and share classes. The fund two-page summaries explain why we have given these ratings and contain information on the other share classes.

Fund objective

The fund aims to provide growth in the long term, which is a period of five years or more, together with income.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide long-term growth together with income. The fund has outperformed the average competitor fund (median) by 0.31% per annum. It achieved a better Sharpe ratio than the average competitor fund, meaning that it outperformed on a risk-adjusted basis. It outperformed its benchmark below, which returned 4.72% annualised over the same period.

Fund objective

The fund aims to provide growth in line with its risk profile in the long term, which is a period of five years or more. The fund’s risk profile is rated as 5 where 1 is a lower level of risk and 5 is a higher level of risk.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide long-term growth. The fund has outperformed the average competitor fund (median) by 2.87% per annum. It achieved a better Sharpe ratio than the average competitor fund, meaning that it outperformed on a risk-adjusted basis.

Performance compared to peer group

OCF compared to peer group*

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in six out of the seven criteria. The fund has delivered on its objective of providing long term growth but is marginally behind its peer group over a 5-year period. This underperformance is driven by fund’s lower risk setting than the peer group, and notably the fund has also delivered a lower level of volatility than peers.

Action required

Given that the peer group contains funds with a wide range of risks, and that the fund is operating within its stated risk appetite, there is no action to be taken at this stage.

Monthly Income Fund – Accumulation C

Fund objective

The fund aims to provide a monthly income together with growth in the long term, which is a period of five years or more.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide long-term growth and income. The fund has underperformed the average competitor fund (median) by -1.75% per annum. It did not achieve a better Sharpe ratio than the average competitor fund, meaning that it underperformed on a risk-adjusted basis. It did not outperform its benchmark below, which returned 3.84% annualised over the same period.

Performance compared to benchmark

Source: Morningstar and HSBC Asset Management as at 30/06/2024.

Past performance is not an indicator of future returns. The figures are calculated in the share class base currency, dividends reinvested, net of fees.

	This fund	*Peer group median	Cash

- ◆ Size of fund: £79m
- ◆ Benchmark: 70% FTSE All Share Index / 30% Markit iBoxx GBP Corporates Index
- ◆ Peer group: Morningstar EAA OE GBP Allocation 60-80% Equity category

Fund charges

Our fund charges

Ongoing Charges Figure (OCF)	0.60%
Transaction costs	0.00%
Total	0.60%

OCF compared to peer group*

Peer average: 0.81%

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in six out of the seven criteria. The fund has delivered on its objective of providing monthly income but has underperformed the benchmark and peers over the five-year period. Several process enhancements were made four years ago and since then, the fund has been outperforming peers, narrowing the gap significantly, as both the UK market and undervalued companies have delivered better returns.

Action taken

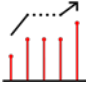

Changes were implemented at the end of 2020 in respect of the equity portion of the fund, including diversifying the types of companies the fund invests in (e.g. increased exposure to technology and healthcare). We continue to consider potential enhancements to the fund going forward.

		Ongoing Charges Figure (OCF) – income share classes:	0.60%	1.30%
	Quality of service Our assessment has concluded that the fund has measured up well against all the quality of service areas within this assessment criterion and delivers value for investors across all share classes.		●	●
	Performance The fund has delivered on its objective of providing monthly income, but has underperformed the benchmark and peers over the five-year period. This underperformance has been driven by the fund's focus on the UK which has underperformed other developed markets over the past few years. The fund's preference for companies that appeared attractive in terms of their valuation also detracted. Following the changes four years ago, the fund has been outperforming peers, as both the UK and undervalued companies have delivered better returns.		●	●
	AFM costs – general Having considered the breakdown of our fund charges and the costs of running the funds and any related services, we have concluded that fair value has been delivered across all share classes.		●	●
	Economies of scale Our assessment of this criteria has concluded that economies of scale savings and benefits have been shared with investors where appropriate.		●	●
	Comparable market rates Our assessment concluded that the OCF of the comparable C share class within this fund was either in line with, or lower than, the OCFs of other similar funds available from other fund managers. The Retail share class was more expensive than the peer average and has been rated amber.		●	●
	Comparable services Our assessment concluded that this fund was not comparable to any other funds, institutional mandates or share classes offered by HSBC.		●	●
	Classes of shares Our assessment of the share classes within the fund concluded that all investors are in the most appropriately priced share class and the points of differentiation between each of the share classes are justified.		●	●

Fund objective

The fund aims to provide growth in line with its risk profile in the long term, which is a period of five years or more. The fund’s risk profile is rated as 1 where 1 is a lower level of risk and 5 is a higher level of risk.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide long-term growth. The fund has underperformed the average competitor fund (median) by -0.35% per annum. It did not achieve a better Sharpe ratio than the average competitor fund, meaning that it underperformed on a risk-adjusted basis.

Performance compared to peer group

Source: Morningstar and HSBC Asset Management as at 30/06/2024.

Past performance is not an indicator of future returns. The figures are calculated in the share class base currency, dividends reinvested, net of fees.

OCF compared to peer group*

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in five out of the seven criteria. The fund has delivered on its objective to provide long-term growth over a five-year period, however it has delivered a lower level of return than the average in its peer group. Performance lagged in the past year driven by the fund’s lower equity allocation than the peer group, and notably the fund has also delivered a lower level of volatility than peers.

Action required

Given that the peer group contains funds with a wide range of risks, and that the fund is operating within its stated risk appetite, there is no action to be taken at this stage.

Sustainable Multi-asset portfolios

ESG considerations in our sustainable multi-asset portfolios

Within our sustainable multi-asset portfolios, we have specific ESG considerations built into our investment process, including:

- ◆ Comparing the ESG and carbon intensity scores of the portfolios to the scores of a reference comparator. This enables investors to better understand their portfolio.
- ◆ A multi-stage portfolio construction framework, which incorporates ESG considerations throughout the investment process and thematic asset classes and strategies (e.g. low carbon), where relevant.
- ◆ ESG considerations and integration approaches, tailored within different asset classes, to better match individual asset characteristics and not compromising allocation and diversification benefits.
- ◆ Actively managing portfolios by adjusting asset allocations to maximise financial outcomes without altering the ESG outcomes e.g. carbon intensity out-performance, alongside financial objectives.
- ◆ Portfolio holdings are tilted towards companies with higher sustainability qualities or exposure to sustainable themes and will provide a better portfolio ESG score and lower carbon footprint than the market.
- ◆ Selected investment funds will be invested according to the sustainable investment strategies defined by HSBC Asset Management or by using investment methods recognised by the Global Sustainable Investment Alliance (GSIA)* to provide integrity and diversification of strategies. Some portfolios may have limited exposure to non-sustainable investments where sustainable investment options are not available, providing these investments apply minimum responsible investment criteria such as banned weapons exclusion, ESG integration, and stewardship, where relevant.
- ◆ Following the implementation of SDR, we are looking at our fund ranges and considering whether a sustainability label may be appropriate. By the end of 2024, we expect to confirm which funds will receive a sustainability label. Investors in those funds will be notified of these changes in advance.

*Global Sustainable Investment Alliance (GSIA) standards include ESG integration, sustainability themed investing, corporate engagement and shareholder voting, positive/best-in-class screening and negative screening.

Fund objective

The fund aims to provide growth in line with its risk profile in the long term, which is a period of five years or more. The fund’s risk profile is rated as 1 where 1 is a lower level of risk and 5 is a higher level of risk. The fund aims to invest in assets that form part of a sustainable investment strategy but may also invest in assets that do not form part of a sustainable investment strategy in order to meet the fund’s aim of providing growth in line with its risk profile.

Performance commentary

Over the two-year period to 30 June 2024, the fund has met its objective to provide growth. The fund has performed in line with the average competitor fund (median) at 2.60% per annum. It also achieved a similar Sharpe ratio as the average competitor fund, meaning that it performed in line on a risk-adjusted basis. At the end of the reporting period, the fund exhibited a 31% relative reduction in carbon intensity score versus its reference comparator.[†] The fund also had a higher ESG score of 6.9 versus its reference comparator score of 6.3.[†]

Performance compared to peer group

	Classes of shares Our assessment of the share classes within the fund concluded that all investors are in the most appropriately priced share class and the points of differentiation between each of the share classes are justified.		●	●
Overall value conclusion			●	●

Active funds

Active fund management is a style of investment management where a fund manager makes decisions about what the fund will invest in, supported by in-depth fundamental and/or quantitative research and analysis. The performance or level of income of the fund may be compared to a benchmark (e.g. FTSE All-Share Index or the Investment Association UK Equity Income sector), which the fund may aim to outperform.

Active funds overview

We offer a mix of fixed income and equity funds across a range of active strategies. Our fixed income specialists, supported by our global research platform, focus on delivering strong risk-adjusted returns. Our active equity strategies are tailored to meet specific investment objectives with a disciplined and differentiated investment approach.

Active fundamental strategies typically seek to identify attractive individual securities which aim to outperform the wider market, whereas multi-factor strategies seek to identify broad characteristics of outperformance like momentum or quality and then overweight the more attractive stocks with that characteristic, while underweighting the least attractive. As a result, multi-factor funds tend to be highly diversified while fundamental strategies tend to be more concentrated.

The following table summarises the outcome of our Assessment of Value for the Investment Association (IA) primary share class* of each of our UK domiciled active funds for the year ending 30 June 2024. We have used the traffic-light system we explained on [page six](#) to come up with the ratings and overall value conclusion for each of our funds and share classes. The fund two-page summaries explain why we have given these ratings and contain information on the other share classes.

*The Investment Association (IA) primary share class is the highest charging unbundled (free of any rebates or intermediary commission) share class freely available through third-party distributors in the retail market. We have used this share class because it allows common comparisons between funds offered by HSBC AM UK and other providers.

Corporate Bond Fund – Accumulation C

Fund objective

The fund aims to provide higher returns (before charges and tax are deducted from the fund) than the Markit iBoxx GBP Corporates Index plus 1% per year, over three-year periods.

Performance commentary

Over the five-year period to 30 June 2024, the fund has not met its objective to provide higher returns than the Markit iBoxx GBP Corporates index plus 1% net of OCF per year. The fund returned 0.36% annualised over five years versus 0.49% for the target benchmark. It outperformed the peer group median, which returned -0.42% annualised over five years.

Performance compared to benchmark

OCF compared to peer group*

Peer average: 0.52%

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in six out of the seven criteria. The fund has performed well versus its peers but has not achieved its outperformance objective. This was mainly due to poor performance in 2021 and 2022 which were challenging years for the fixed income market. However, following changes, including additional sources of return and adjustment of some of the allocations, we are seeing improvement of its performance.

Action required

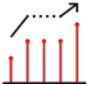

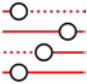

As the changes made have started to take effect, there is no action to be taken at this stage.

Not Met

Fund objective

The fund aims to provide growth over the long term, which is a period of five years or more.

Performance commentary

Over the two-year period to 30 June 2024, the fund has met its objective to provide growth. Returning 14.03% annually over the past 2 years, the fund has underperformed the MSCI Europe ex-UK Index, which returned 15.50% annualised over the same period. It underperformed the peer group median, which returned 15.60% annualised over two years.

Total	0.91%

OCF compared to peer group*

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in six out of the seven criteria. The fund relative performance is highly correlated with market sentiment regarding interest rates and inflation.

Action required

We do not believe any action is required as the fund was launched in August 2021 and it needs more time to deliver performance in line with its objectives. We currently focus on a growth and quality-oriented approach, but this can change according to the market’s dynamic to maintain our aim of delivering outperformance in the long-term, with a disciplined process, in line with investors’ expectations.

Global Property Fund – Accumulation C

Fund objective

The fund aims to provide growth in the long term, which is a period of five years or more.

Performance commentary

Over the five-year period to 30 June 2024, the fund has not met its objective to provide long-term growth. In returning annualised growth of -1.62% the fund underperformed its reference benchmark, IA UK Direct Property (20%) & IA Property Other (80%), which together returned -0.91% annualised over the same period. It underperformed the peer group median, which returned an annualised 0.73% over five years.

Total	1.00%

OCF compared to peer group*

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in six out of the seven criteria. Performance suffered in March 2020 and in 2022 due to the bias towards listed property equities relative to direct property funds. Listed property experienced exceptionally large declines in March 2020 as a result of the pandemic, and again in 2022 due to the anticipated impact of rising interest rates on property values. However, the positioning enabled it to remain open for dealing during a period when direct property funds suspended. Over the past 12 months the performance of global listed real estate has improved as interest rates have peaked, which has helped relative performance.

Action taken

We have transitioned the fund into a directly managed global listed real assets fund, investing in both listed infrastructure and listed real estate. A shareholder communication has been issued giving notification of the changes which took effect from 24 September 2024. We believe these changes will benefit our investors.

Fund objective

The fund aims to provide income together with growth in the long term, which is a period of five years or more. The fund intends to provide a level of income consistent with the Investment Association (IA) UK Equity Income sector definition.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide income together with long-term growth. The fund delivered a rolling three-year average income of 4.0% per year (to 15 January) exceeding 3.5% per year for the relevant index which is in line with the IA sector definition, thus meeting its income objective. Returning 4.60% annually over the past five years, the fund has underperformed the FTSE All Share Index, which returned 5.54% annualised over the same period. It also underperformed the peer group median, which returned 5.17% annualised over five years.

Performance compared to benchmark

Overall conclusion

We have concluded that the primary share class has **Met** its aim of delivering value to investors. Value has been achieved in five out of the seven criteria. The fund has provided income but has struggled to provide much growth, underperforming the FTSE All Share Index over the 5-year period, but performance has improved in recent years. Over a 3-year basis it outperformed the benchmark and peer group median considerably.

Action taken

At the end of 2020, a number of process enhancements were implemented, including further investment in technology, to improve the breadth and depth of our research. Since then, the fund’s performance has improved relative to the benchmark and peers. We believe that the current risk budget is appropriate and requires more time to demonstrate value over the long term.

	Quality of service Our assessment has concluded that the fund has measured up well against all the quality of service areas within this assessment criterion and delivers value for investors across all share classes.		●
	Performance All the fund's share classes have achieved their performance objective and other measures within their investment policy and strategy and the fund performs well versus peers.		●
	AFM costs – general Having considered the breakdown of our fund charges and the costs of running the funds and any related services, we have concluded that fair value has been delivered across all share classes.		●
	Economies of scale Our assessment of this criteria has concluded that economies of scale savings and benefits have been shared with investors where appropriate.		●
	Comparable market rates Our assessment concluded that the OCFs of the share classes within this fund were either in line with, or lower than, the OCFs of other similar funds available from other fund managers.		●
	Comparable services Our assessment concluded that this fund was not comparable to any other funds, institutional mandates or share classes offered by HSBC.		●
	Classes of shares Our assessment of the share classes within the fund concluded that all investors are in the most appropriately priced share class and the points of differentiation between each of the share classes are justified.		●
Overall value conclusion			●

US Multi-Factor Equity Fund – Institutional A Income

Met

Partially Met

Not Met

Fund objective

The fund aims to provide growth in the long term, which is a period of five years or more.

Performance commentary

Over the five-year period to 30 June 2024, the fund has met its objective to provide long-term growth. Returning 15.25% annually over the past 5 years, the fund has outperformed the S&P 500 Index, which returned 14.63% annualised over the same period. It outperformed the peer group median, which returned 14.31% annualised over five years.

Performance compared to benchmark

Source: Morningstar and HSBC Asset Management as at 30/06/2024.

Past performance is not an indicator of future returns. The figures are calculated in the share class base currency, dividends reinvested, net of fees.

Overall value conclusion		●

Glossary of terms

Accumulation share: Funds are divided into portions called shares. With accumulation shares, the income earned by the fund is not paid out to investors but is instead retained in the fund and reflected by an increase in the value of each accumulation share.

Actively managed: The fund manager uses their expertise to pick investments to achieve the fund's objectives.

Annual Management Charge (AMC): An ongoing fee paid to the management company for managing the fund, usually charged as a percentage of the value of the investment.

Asset allocation: Dividing the money invested in the fund across different investments ('assets'), e.g. in different geographic areas or by industry sectors such as oil and gas or financial companies.

Assets Under Management (AUM): The total market value of the investments. This could be presented as the value of a fund or the value that an entity manages on behalf of clients.

Authorised Corporate Director (ACD): HSBC Asset Management (Fund Services UK) Limited is the ACD of the fund range.

Bond(s): A loan, usually to a company or government in return for regular payments (known as the coupon) and a promise that the original investment (principal) is paid back at a specified date.

Carbon intensity score: Measuring the portfolio's exposure to carbon-intensive companies, expressed in tons CO₂e/USD million revenue, compared to the composition of a reference comparator.

Clean share classes: The charges for clean share classes reflect the costs of managing and operating a fund, but do not generally reflect trail commission paid to financial advisers or rebates paid to fund supermarkets and other distributors. Investors pay financial advisers and fund supermarkets separately for the services they provide. This means that clean share classes usually have lower charges compared to legacy (also known as bundled) share classes. Clean share classes are widely available to retail investors through distributors such as fund supermarkets.

Credit rating: An assessment of the credit risk of a company, government or other organisation. It seeks to measure how likely it is that the issuer of a bond will be able to continue to make interest payments and repay the money loaned to it.

Currency exposure: The potential for a fund that invests overseas to lose or gain money purely because of changes in the currency exchange rate.

Derivatives: Investments whose value is linked to another investment, or to the performance of a stock exchange or to some other variable factor, such as interest rates.

Developed markets: Countries with relatively high levels of personal income and established economies.

Dilution levy/adjustment also known as swing or Anti-Dilution Levy (ADL): An amount paid to cover the dealing cost of the fund when it buys or sells investments as a result of the buying or selling shares in the fund. Any dilution levy/adjustment is paid into the fund and is normally only charged when those dealing costs are high. Its purpose is to protect investors already in the fund from the costs incurred when others buy or sell shares.

Diversification: Holding a variety of investments that typically perform differently from one another.

Emerging markets: Countries that are progressing economically toward becoming advanced, usually shown by some development in financial markets, the existence of some form of stock exchange and a regulatory body.

Environmental, Social, and Governance (ESG): Three key factors used for measuring the sustainability and ethical impact of an investment in a business or company. Environmental criteria consider how a company performs as a steward of nature. Social criteria examine how it manages relationships with employees, suppliers, customers, and the communities where it operates. Governance deals with a company's leadership, executive pay, audits, internal controls, and shareholder rights.

Equities: Shares issued by a company.

ESG Improvement score: ESG scores measure companies' characteristics relating to Environmental, Social and Governance factors. These can be scored either as a rating of AAA (best) to CCC (worst) or 0-10 where 10 is the highest rating.

Exchange Traded Fund (ETF): Types of funds that are traded on a stock exchange. Most ETFs aim to track the performance of a particular index of stocks, bonds or other assets and often have low management costs.

Futures: A financial contract obligating the buyer to purchase an asset (or the seller to sell an asset), such as a physical commodity or a financial instrument, at a predetermined future date and price.

Government bond or Gilt: A loan to a national government in return for regular payments (known as the coupon) and a promise that the original investment (principal) is paid back at a specified date. Gilts are loans to the UK government.

Glossary of terms (continued)

Growth: The increase in value of investments.

Hedge or hedging: Using some investments as a way to reduce risk.

High yield bond: A bond paying a higher level of interest but which has a lower credit rating than investment grade.

Income: Money paid out by an investment, such as interest from a bond or a dividend from a share.

Income share: Funds are divided into portions called 'shares'. With income shares, the income earned by the fund is paid out to investors.

Information ratio: Measures of the active return of an investment (e.g. a security or portfolio) compared to a benchmark index relative to the volatility of the active return (also known as active risk or benchmark tracking risk).

Investment Association (IA) primary share class: This is usually the C Accumulation share class which is free of any rebates or intermediary commission. We have used this share class throughout this report because it allows common comparisons between funds offered by HSBC AM UK and other providers.

Investment grade: A credit rating that indicates the issuer of a bond has a relatively low risk of being unable to make interest payments or repay the money owed.

Legacy share classes: The charges for legacy (also known as bundled) share classes reflect the costs of managing and operating a fund and also reflect trail commission paid to financial advisers or rebates paid to fund supermarkets and other distributors. This means that legacy share classes usually have higher charges compared to clean share classes. The legacy share classes are closed to new investors.

Liquidity: The degree to which an investment can be quickly bought or sold on a market without affecting its price.

Market capitalisation: The total market value of a company's or fund's outstanding shares. Commonly referred to as 'market cap', it is calculated by multiplying a company's shares outstanding by the current market price of one share.

Markets in Financial Instruments Directive (MiFID): European regulation that increases the transparency across the European Union's (EU) financial markets and standardises the regulatory disclosures required for firms operating in the European Union. Although the UK has left the EU this regulation still applies to UK funds.

Maturity: The period of time left for a bond or gilt to remain outstanding before the original loan and any final interest is repaid to the lender.

Money market instruments: Investments usually issued by banks or governments that are a short term loan to the issuer by the buyer. The buyer receives interest and the return of the original amount at the end of a certain period.

Ongoing Charges Figure (OCF): A measure of what it costs to invest in a fund. It includes the fee paid to the management company and other operating costs.

Packaged Retail and Insurance-based Investment Products (PRIIPs): Category of financial assets that are regularly provided to consumers in the European Union (EU) through banks or other financial institutions as an alternative to savings accounts. Although the UK has left the EU this regulation still applies to UK funds.

Passively managed: The fund manager aims to track the performance of a stock exchange index or another investment.

Platform: An online service that allows you to buy and sell shares and funds and see your investments in one place.

Property-related securities: Shares of funds or property companies that own, manage or develop property and Real Estate Investment Trusts (REITs), which are investment companies that own buildings and land.

Relative return: The profit or loss on an investment compared to how other investments have performed.

Return(s): The money made or lost on an investment.

Rolling three-year period: Any period of three years, no matter which day you start on.

Securities lending: Process whereby those holding investments (such as the shares of a company in which a fund has invested) lend those shares to other parties who pay the fund a fee for borrowing.

Share(s): An equal portion representing part ownership of a company. Can also apply to a fund.

Share class: One of the types of share representing part ownership of the fund that is different to other share classes for some reason, such as it pays out income rather than retaining it in the fund.

Sharpe ratio: A measure for calculating the risk-adjusted return. This ratio has become the industry standard for such calculations.

Glossary of terms (continued)

Tracking error: Measure of the consistency between an index fund's performance and the performance of the index. In general, the lower the tracking error, the more consistent the fund's performance is relative to the Index, and vice-versa. Tracking error can be impacted by various factors including the difference in timing between the Fund Valuation (12 noon UK time) and the Index calculation (close of business) and market volatility.

Transaction costs: Transaction costs calculation methodologies are prescribed under the PRIIPs and MIFID regulations. We include the impact of anti-dilution (ADL) in the transaction costs calculation.

Unit: An equal portion representing part ownership of a fund (note: 'Share' has a similar meaning but for funds structured as corporate entities such as an open-ended investment company).

Volatility: A measure of the size of short term changes in the value of an investment.

Yield: The income from an investment, usually stated as a percentage of the value of the investment.

Important information

Key risks

There are inherent risks in investing in securities markets. Security prices are subject to market fluctuations and can move irrationally and be unpredictably affected by many and various factors including political and economic events, pandemics and market rumours. There can be no assurance that any appreciation in the value of investments will occur. **The value of investments and the income derived from them may go down as well as up and investors may receive back less than the original amount invested.** There is no guarantee that the investment objectives of any fund will be achieved. It is important to note that past performance cannot be regarded as an indication of future performance. Please remember that inflation will reduce what you can buy in the future with your investment.

The following risks may be applicable to the funds featured in this document. Further information on each fund's potential risks can be found in the Key Investor Information Document (KIID) for the relevant fund and the relevant Company Prospectus.

Exchange rate risk: Investing in assets denominated in a currency other than that of the investor's own currency perspective exposes the value of the investment to exchange rate fluctuations.

Counterparty risk: The possibility that the counterparty to a transaction may be unwilling or unable to meet its obligations.

Liquidity risk: Liquidity is a measure of how easily an investment can be converted to cash without a loss of capital and/or income in the process. The value of assets may be significantly impacted by liquidity risk during adverse market conditions.

Operational risk: The main risks are related to systems and process failures. Investment processes are overseen by independent risk functions which are subject to independent audit and supervised by regulators.

Derivative risk: The value of derivative contracts is dependent upon the performance of an underlying asset. A small movement in the value of the underlying can cause a large movement in the value of the derivative.

Emerging market risk: Investments in emerging markets have, by nature, higher risk and are potentially more volatile than those made in developed countries. Markets are not always well regulated or efficient, and investments can be affected by reduced liquidity.

Interest rate risk: As interest rates rise, debt securities will fall in value. The value of debt securities is inversely proportional to interest rate movements.

Default risk: The issuers of certain bonds could become unwilling or unable to make payments on their bonds.

Credit risk: Issuers of debt securities may fail to meet their regular interest and/or capital repayment obligations. All credit instruments therefore have potential for default. Higher yielding securities are more likely to default.

CoCo bond risk: Contingent convertible securities (CoCo bonds) are comparatively untested, their income payments may be cancelled or suspended, and they are more vulnerable to losses than equities, and can be highly volatile.

Equity risk: Portfolios that invest in securities listed on a stock exchange or market could be affected by general changes in the stock market. The value of investments can go down as well as up due to equity markets movements.

Index tracking risk: To the extent that the fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ('tracking error').

Foreign exchange risk: Where overseas investments are held, the rate of exchange of the currency can cause the value to go down as well as up.

Model risk: Model risk occurs when a financial model used in the portfolio management or valuation processes does not perform the tasks or capture the risks it was designed to. It is considered a subset of operational risk, as model risk mostly affects the portfolio that uses the model.

Concentration risk: Funds with a narrow or concentrated investment strategy may experience higher risk and return fluctuations and lower liquidity than funds with a broader portfolio.

Volatility risk: Volatility risk is the risk of a change of price of a portfolio as a result of changes in the volatility of a risk factor. It usually applies to portfolios of derivative instruments, where the volatility of its underlying investments is a major influencer of prices. In option pricing formulae, the volatility risk is showing the extent to which the return of the underlying asset will fluctuate between now and the option's expiration. The use of volatility futures (ie. VIX future) could expose (hedge) the portfolio to (against) the volatility fluctuation.

Commodity risk: Commodity risk refers to the uncertainties of future market values caused by the fluctuation in the prices of commodities. The future price of a commodity can be affected by various factors affecting regulatory or political changes, seasonal changes, technological advancements, etc.

Important information (continued)

Intervention on forwards' market risk: Exposure to markets, assets, indices through forward financial instruments may lead to significantly higher or faster declines in net assets value than the change observed for the underlying instruments.

Discretionary management risk: Discretionary management is based on anticipating the evolution of different markets and securities. There is a risk that sub funds will not be invested at any time in the most efficient markets and securities.

Total return risk: If a strategy applies a total return strategy, it does not imply there is any protection of capital or guarantee of a positive return over time. These strategies are subject to market risks at any time.

High yield risk: Please note that strategies invested in high yield issues, have exposure to a higher risk of default compared to investment grade issues.

Asset backed securities (ABS) risk: Please note that strategies may be authorised to invest all of its assets in Asset Backed Securities (ABS), which are less liquid than standard bond issues.

Important Information

The material contained in this Assessment of Value is for information only, is not legal, tax or investment advice, and it is not a recommendation to buy or sell investments. You must not, therefore, rely on the content of this material when making any investment decisions.

This material is not intended for distribution to, or use by, any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation.
