

HSBC Investment Funds

Corporate Bond Fund

Marketing communication | Monthly report 31 July 2025 | Share class Acc C

Investment objective

The Fund aims to provide higher returns (before charges and tax are deducted from the Fund) than the Markit iBoxx GBP Corporates Index plus 1% per year, over three-year periods.

Investment strategy

To achieve its objective the Fund will invest at least 80% of its value in bonds that have a credit rating of investment grade and are issued in sterling or are hedged back to sterling. The bonds may be issued by companies and supranational or government-backed organisations which may be located anywhere in the world. The types of bond the Fund may invest in include covered bonds and asset backed securities. The Fund is managed with reference to the Markit iBoxx GBP Corporates Index. The fund manager is not limited to investing in bonds that are part of the Markit iBoxx GBP Corporates Index. The fund manager aims to generate returns in excess of the Markit iBoxx GBP Corporates Index plus 1% per year, over three-year periods, before charges and tax are deducted from the Fund. This is based on our current view of returns the Fund may potentially achieve, which may change. The Markit iBoxx GBP Corporates Index is also considered as part of our investment risk monitoring process, to check that the overall level of risk taken by the fund manager is not inconsistent with the sterling corporate bond market. The performance of the Fund is shown against the performance of the Markit iBoxx GBP Corporates Index plus 1% per year.

Main risks

- The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.

Risk disclosures

- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Liquidity is a measure of how easily the Fund's holdings can be quickly converted to cash. The value of the Fund's holdings may be significantly impacted by liquidity risk during adverse market conditions.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
