

HSBC Global Funds ICAV

Sustainable Development Bank Bonds UCITS ETF

Marketing communication | Monthly report 30 June 2025 | Share class ZQ1

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

Investment objective

The Fund aims to provide regular income and capital growth by tracking as closely as possible the performance of the FTSE World Broad Investment-Grade USD Multilateral Development Bank Bond Capped (the Index). The Fund is classified under Article 9 of SFDR.

Investment strategy

The Fund achieves its sustainable investment objective by tracking the Index which has a methodology aligned with that sustainable objective and so the Index has been designated as the Fund's reference benchmark for the purpose of attaining that sustainable objective.

The Fund will invest in bonds issued by select multilateral development banks the proceeds of which financially support sustainable economic development in developing countries.

The Index includes issuers with a minimum credit quality of BBB- by S&P or Baa3 by Moody's. The market weight of the issuers is capped at 25%.

The Index applies controversial conduct exclusions based on United Nations Global Compact (UNGC) Principles to the multilateral development bank bonds and invests up to 35% in bonds issued by the multilateral development banks.

The Fund is passively managed and utilises an investment technique called optimisation.

The Fund may invest in cash and money market instruments, and up to 10% of its assets in other funds.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

Share class details

Key metrics

NAV per share	USD 10.09
Yield to maturity	3.88%

Fund facts

Risk disclosures

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
