HSBC World ESG Biodiversity Screened Equity UCITS ETF

a sub-fund of HSBC ETFs PLC, (the "UCITS");
managed by HSBC Investment Funds (Luxembourg) S.A.

Class:USD (Acc)
ISIN:IE0002UTLE51

Objectives and Investment Policy

Investment Objective:

The Fund aims to track as closely as possible the returns of the Euronext ESG Biodiversity Screened World USD Index (the Index). The Fund will invest in, or gain exposure to shares which make up the Index.

Investment Policy:

The Index is a subset of the Euronext World Index (Parent Index) and made up of companies which are ranked by free float market capitalisation, with the 500 highest ranked companies being selected for the Index, from developed equity markets worldwide.

In replicating the performance of the Index, the Fund promotes certain environmental, social and/or governance (ESG) characteristics and has been categorised as an Article 8 fund for the purpose of the SFDR.

The Index employs a scoring, ratings and an exclusion based approach which considers, amongst other things, the impact of a company's activities on biodiversity. The Fund excludes: companies with a free float market capitalisation of less than 2 billion Euro; companies with Corporate Biodiversity Footprint scores of 5 or 6 or unscored; companies amongst those with the worst 25% ESG Risk score; companies identified as being involved in controversial weapons, tobacco, and other industries; and companies breaching United Nations Global Compact (UNGC) Principles. Please refer the Fund's Supplement for more details; including for the Corporate Biodiversity Footprint and ESG Risk scores, and also the Index construction methodology.

The Fund is passively managed and aims to invest in the shares of the companies in generally the same proportion as in the Index. There may be circumstances when it is not possible for the Fund to invest in all

constituents of the Index and may gain exposure by using other investments such as depositary receipts, funds, or derivatives.

The Fund may invest up to 35% of its assets in securities from a single issuer during exceptional market conditions and up to 10% of its assets in other funds.

The Fund may invest up to 10% of its assets in total return swaps and contracts for difference. However, this is not expected to exceed 5%.

The Fund may also invest in derivatives for efficient portfolio management purposes (such as to manage risk and costs, or to generate additional capital or income) and for investment purposes.

Risk and Reward Profile

The risk and reward indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.

The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean a risk-free investment.

Why is this Fund in this specific category?

This Fund is classified in category 6 because its price or simulated data has shown high fluctuations historically.

Material risks not fully captured by the Risk and Reward Indicator:

- ◆ **Counterparty Risk** The possibility that the counterparty to a transaction may be unwilling or unable to meet its obligations.

- ◆ **Derivatives Risk** Derivatives can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- ◆ **Exchange Rate Risk** Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some cases significantly.
- ◆ **Index Tracking Risk** To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- ◆ **Investment Leverage Risk** Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- ◆ **Liquidity Risk** Liquidity Risk is the risk that a Fund may encounter difficulties meeting its obligations in respect of financial liabilities that are settled by delivering cash or other financial assets, thereby compromising existing or remaining investors.
- ◆ **Operational Risk** Operational risks may subject the Fund to errors affecting transactions, valuation, accounting, and financial reporting, among other things.
