HSBC S&P INDIA TECH UCITS ETF

Marketing communication | Monthly report 30 September 2025 | HITD LN | EUR (Acc)

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

Investment objective

The Fund aims to track as closely as possible the returns of the S&P India Tech Index (the Index). The Fund will invest in, or gain exposure to, shares of companies which make up the Index. The Fund has been categorised as an Article 6 fund for the purpose of the SFDR.

Investment strategy

The Index is a subset of the S&P India BMI Index (Parent Index) and measures the performance of the Indian share market, as determined by the Index Provider.

The Index measures the performance of the leading companies operating in technology related businesses from the Indian market based on their RBICS classification and operating in the following segments: software, digital technology and communication. The companies must demonstrate a RBICS Revenue of 90% or 80% for current constituents.

The Index excludes companies with exposure to: controversial weapons, recreational & medical cannabis, thermal coal extraction & generation .

The Fund is passively managed and aims to invest in the shares of the companies in generally the same proportion as in the Index.

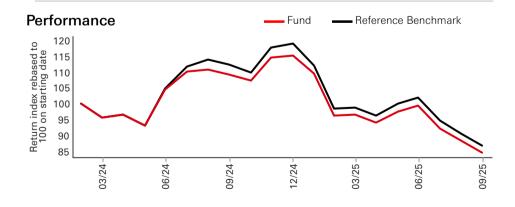

The Fund may invest up to 10% of its assets in other funds, up to 35% in securities from a single issuer during exceptional market conditions, and up to 10% in total return swaps and contracts for difference

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- The Fund may be concentrated in a limited number of securities, economic sectors and/or countries and as a result, may be more volatile and have a greater risk of loss than more broadly diversified funds.

Risk disclosures

- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
