## HSBC Global Funds ICAV

# Euro Lower Carbon Government 10+ Year Bond UCITS ETF

**Marketing communication | Monthly report** 31 October 2026 | - | **ETFC**

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

## Investment objective

The Fund aims to provide regular income and capital growth.

## Investment strategy

The Fund tracks as closely as possible the performance of the Bloomberg Euro Treasury 10+ Year Carbon Tilted Index (the Index), while minimising the tracking error between the Fund's performance and that of the Index, while promoting environmental, social and governance (ESG) characteristics within the meaning of Article 8 of SFDR.
The Fund may invest in European government bonds, agency and supranational bonds (developed and emerging markets) which are Index constituents and will not embed a derivative and/or leverage.
The Index seeks to achieve an improvement in carbon emissions against that of the Bloomberg Euro Aggregate 10+ Year Treasury Bond Index (the Parent Index).
The Index is based on the Bloomberg Index Methodology, which applies an eligibility criterion based on a set of fundamental core design principles and applies carbon tilt factors towards countries with lower carbon-per-capita levels relative to the Parent Index.
The credit ratings of the Fund's underlying investments may vary from time to time.
The Fund is passively managed and utilises an investment technique called optimisation.
The Fund may invest in money market instruments and also may invest up to 10% of its assets in other funds.
Please refer to the Fund's Supplement for a full description of the investment objectives and derivative usage.

## Main risks

- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

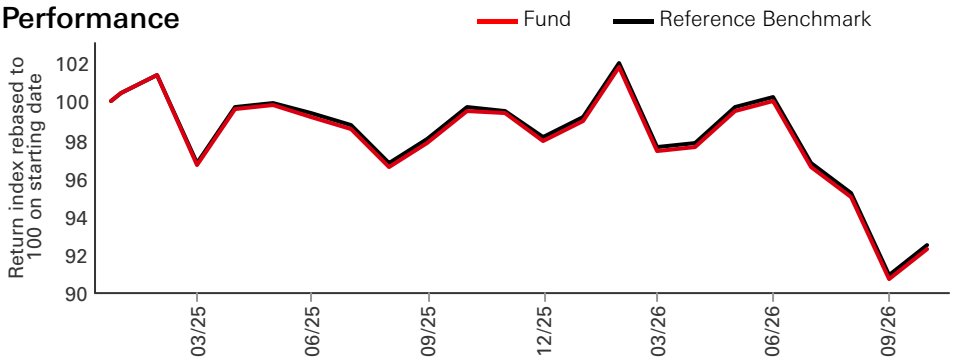

## Share class details

| | |
|---|---|
| **Key metrics** | |
| NAV per share | **EUR 9.23** |
| Performance 1 month | **1.69%** |

## Risk disclosures

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
