

HSBC Global Funds ICAV

Global Transition Resources Equity Fund

Marketing communication | Monthly report 30 June 2025 | Share class BC

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

Investment objective

The Fund aims to provide long-term capital growth and seeks to invest in instruments that offer thematic equity exposure.

Investment strategy

The Fund is actively managed. The Fund invests in listed shares predominantly in, but not limited to, the materials sectors. The Fund will invest up to 100% of its assets in shares (and other similar securities) linked to transition resources and services that are critical to enabling a clean energy eco-system. The Fund aims to provide long-term value by investing in a concentrated portfolio of shares (and other similar securities) of companies worldwide that enable the energy transition, while promoting environmental, social and governance (ESG) characteristics within the meaning of Article 8 of the European Union's SFDR. At least 80% of underlying investment holdings will have a minimum of 20% revenues related to transition resources products and services. The Fund will not invest in specific excluded activities, such as: companies involved in the production of controversial weapons and tobacco; thermal coal extraction and generation; uranium mining; and non-compliance with UNGC principles. The Fund may invest up to 10% in cash and other funds for ancillary liquidity purposes. The Fund may invest up to 5% in a single fund. See the Prospectus for a full description of the investment objectives, sustainability framework, materials segments, excluded activities and derivative usage.

Main risks

- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- The Fund may be concentrated in a limited number of securities, economic sectors and/or countries and as a result, may be more volatile and have a greater risk of loss than more broadly diversified funds.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

Risk disclosures

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
