HSBC MSCI WORLD VALUE SCREENED UCITS ETF

Marketing communication | Monthly report 31 October 2026 | **HWVL LN | USD (Acc)**

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

Investment objective

The Fund aims to track as closely as possible the returns of the MSCI World Value Select Screens Advanced Index (the Index), that provides investors the opportunity to gain specific exposure to companies with lower market valuations relative to their fundamental value, while integrating environmental, social and governance (ESG) metrics. The Fund will invest in or gain exposure to shares of companies which make up the Index. The Fund qualifies under Article 8 of SFDR.

Investment strategy

The Index is a subset of the MSCI World Index (Parent Index), and is made up of large and mid-cap companies based in developed market countries, as defined by the Index Provider.
The Index applies screens to the Parent Index to exclude securities of companies with exposure to: controversial and nuclear weapons, adult entertainment, alcohol, gambling, nuclear power, thermal coal power, fossil fuel and tobacco.
The Fund is passively managed and aims to invest in the shares of the companies in generally the same proportion as in the Index.
The Fund may invest up to 10% of its assets in other funds, up to 35% of its assets in securities from a single issuer during exceptional market conditions, and up to 10% in total return swaps and contracts for difference.
See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

Broad market index	6.8	6.4	5.0	5.8

The MSCI ESG Key Issue Score is the numerical, weighted average of MSCI's E, S, and G pillar scores. A higher number indicates a more favourable ESG profile in the view of MSCI.

The weighted averages of the Key Issue Scores are aggregated and companies' scores are normalized by their industries. After any overrides are factored in, each company's Final Industry-Adjusted Score corresponds to a rating.

Risk disclosures

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
