

HSBC Global Funds ICAV

Euro Corporate Bond UCITS ETF

Marketing communication | Monthly report 30 June 2025 | Share class XC

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

Investment objective

The Fund aims to provide income and capital growth.

Investment strategy

The Fund tracks as closely as possible the performance of the Bloomberg Euro Aggregate Corporate Bond Index (total return) (the Index). The Index is a rules-based benchmark that tracks the investment grade, euro-denominated and fixed rate corporate bond market. Only bonds with a maturity of 1 year and above are eligible. The currency of the Index is EUR and returns are unhedged. The Index is based on the Bloomberg Index Methodology which applies an eligibility criteria based on a set of fundamental core design principles which are designed to accurately and comprehensively measure the underlying Index constituents. The Fund is passively managed and may invest in corporate investment grade bonds (developed and emerging markets), and other bonds all of which are Index constituents. The credit ratings of the Fund's underlying investments may vary from time to time. The Fund will utilise an investment technique called optimisation which seeks to minimise the difference in return between the Fund and the Index. The Fund will not necessarily invest in every constituent of the Index. The Fund will not invest more than 10% of its assets in other funds. See the Prospectus for a full description of the investment objectives, Index and derivative usage.

Main risks

- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.

Share class details

Key metrics

NAV per share	EUR 10.23
Yield to maturity	3.14%

Fund facts

UCITS V compliant	Yes
ISA eligible	Yes
Dividend treatment	Accumulating
Dealing frequency	Daily
Valuation time	23:00 Ireland
