

HSBC Global Liquidity Funds Plc

HSBC Australian Dollar Liquidity Fund

Monthly report 31 March 2024 | Share class GROSS

Investment objective

The Fund aims to provide security of capital, and a return that is similar to Australian money markets.

Investment strategy

The Fund is actively managed. The Fund will invest in a diversified portfolio of short-term securities, instruments and obligations. These instruments will be short-term fixed or floating-rate securities that mature in 397 days or less. They will be issued by companies, governments and government-related entities and either listed/ traded on a Recognised Market. The Fund's investments will, at the time of purchase, have a credit rating of least A-1 or P-1 (or its equivalent) from a recognised credit rating agency, such as Standard & Poor's or Moody's. The Fund can invest in a range of short-term securities, instruments and obligations such as- certificates of deposit; bank deposits, medium term, variable and floating rate notes; commercial paper; bank deposits and bankers acceptances; government bonds/ notes; corporate bonds and Eurobonds; asset backed securities and reverse repurchase agreements. The Fund's liquidity is daily – meaning investors can redeem their investment on any business day. The Fund is classified as a Low Volatility NAV Money Market Fund under the European Union Money Market Fund Regulations. The Fund's primary currency exposure is to Australian dollars. See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The value of investments and any income from them can go down as well as up and you may not get back the amount originally invested.
- Investing in assets denominated in a currency other than that of the investor's own currency exposes the value of the investment to exchange rate fluctuations
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.

Risk disclosures

- The Fund's objective may not be achieved in adverse market conditions. During times of very low interest rates, the interest received by the Fund could be less than the costs of operating the Fund.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
