# US Equity Index Fund

Marketing communication | Monthly report 30 April 2025 | Share class BC

This product is based overseas and is not subject to UK sustainable investment labelling and disclosure requirements.

## Investment objective

The Fund aims to provide long-term capital growth by tracking as closely as possible the performance of the S&P 500 Net Total Return Index (the Index).

## Investment strategy

The Index is comprised of the 500 largest companies in the United States, as defined by the Index provider. The Fund will be passively managed and will aim to invest in the shares of companies in the same proportion as in the Index. However, there may be circumstances when it is not possible or practical for the Fund to invest in all constituents of the Index. If the Fund cannot invest directly in the companies that constitute the Index, it can gain exposure by using other investments such as depositary receipts, derivatives and funds. The Fund may also invest in money market instruments. The Fund may invest up to 10% of its assets in other funds, including HSBC funds. It may also invest up to 10% of its assets in total return swaps. The Fund can invest up to 20% in securities from a single issuer, however in exceptional market conditions the Fund can invest up to 35%. See the Prospectus for a full description of the investment objectives and derivative usage.

## Main risks

- The value of investments and any income from them can go down as well as up and investors may not get back the amount originally invested
- Investing in assets denominated in a currency other than that of the investor's own currency exposes the value of the investment to exchange rate fluctuations
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.

## Risk disclosures

- The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Where overseas investments are held the rate of currency exchange may cause the value of such investments to go down as well as up.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
