The Fund aims to do this with a lower carbon intensity and a higher ESG score, calculated as a weighted average of the ESG scores of the Fund's investments, than the weighted average of the constituents of the reference benchmark.

Investment Policy:

In normal market conditions, the Fund will invest at least 90% of its assets in shares of companies of any size related to the real estate industry and/or Real Estate Investment Trusts based in developed markets and emerging markets.

The Fund includes the identification and analysis of an issuer's ESG credentials as an integral part of the investment decision making process to help assess risks and potential returns. Companies and/or issuers considered for inclusion within the Fund's portfolio will be subject to excluded activities in accordance with HSBC Asset Management's Responsible Investment Policies, which may change from time to time. Please refer to the Prospectus for more details on ESG credentials and excluded activities.

ESG credentials, excluded activities and the need for enhanced due diligence may be identified and analysed using both HSBC's proprietary ESG Materiality Framework as well as research & information provided by financial and non-financial data providers. The Fund may invest up to 20% in China A and China B-shares. For China A-shares, up to 10% through the Shanghai-Hong Kong Stock Connect and the Shenzhen-Hong Kong Stock Connect, up to 10% in CAAPs and up to 10% in CAAPs issued by any single issuer.

The Fund may invest up to 10% of its assets in other funds and may also invest in bank deposits and money market instruments for treasury purposes.

Risk and Reward Profile

The risk and reward indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.

The risk and reward category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean a risk-free investment.

Why is this Fund in this specific category?

This Fund is classified in category 6 because its price or simulated data has shown high fluctuations historically.

Material risks not fully captured by the Risk and Reward Indicator:

- ◆ **Counterparty Risk** The possibility that the counterparty to a transaction may be unwilling or unable to meet its obligations.

- ◆ **Derivatives Risk** Derivatives can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- ◆ **Exchange Rate Risk** Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some cases significantly.
- ◆ **Investment Fund Risk** Investing in other funds involves certain risks an investor would not face if investing in markets directly. Governance of underlying assets can be the responsibility of third-party managers.
- ◆ **Investment Leverage Risk** Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- ◆ **Liquidity Risk** Liquidity Risk is the risk that a Fund may encounter difficulties meeting its obligations in respect of financial liabilities that are settled by delivering cash or other financial assets, thereby compromising existing or remaining investors.
- ◆ **Operational Risk** Operational risks may subject the Fund to errors affecting transactions, valuation, accounting, and financial reporting, among other things.
- ◆ **Real Estate Investments Risk** Real estate and related investments can be negatively impacted by any factor that makes an area or individual property less valuable.
